

said edge surfaces, said covered portion being substantially all of said trim that is visible when said trim is installed on the building;

a resin treatment formed on at least the exposed surface of said paper; and adhesive spread between substantially all of said paper and said substrate.

25. (New) The wood product of claim 24 wherein said trim is fixedly mounted on said building.

26. (New) The wood product of claim 25 wherein said rear surface includes a mounting surface that flushly abuts the building when said trim is mounted thereon.

27. (New) The wood product of claim 24 wherein said substrate comprises an engineered wood product.

28. (New) The wood product of claim 27 wherein said engineered wood product comprises laminated veneer lumber and wherein said front surface comprises a surface on an outer veneer of said substrate and said edge surfaces comprise edges of veneer layers in said laminated veneer lumber.

29. (New) The wood product of claim 28 wherein said laminated veneer lumber comprises plywood.

30. (New) The wood product of claim 27 wherein said engineered wood product comprises fiberboard and wherein said front surface comprises a top surface of said fiberboard and said edge surface comprises an edge of said fiberboard.

31. (New) The wood product of claim 24 wherein said substrate has a substantially rectangular cross section.

32. (New) The wood product of claim 31 wherein said paper covers a portion of said rear surface adjacent both of said edge surfaces.
